Week 2

- Review
- What is CSS?
- CSS Syntax
- CSS Properties
- Using Web Fonts
- Browser Developer Tools
- Getting on the Web

HTML Review

HTML Tags

```
<p>Some content</p>
```

```
<p><em>Some</em> content</p>
```

```
<ul>
```

```
    <li>Item 1</li>
```

```
    <li>Item 2</li>
```

```
</ul>
```

HTML Attributes

`<a>Non-working link`

`Great! `

HTML Tags

`<h1>`

`<h2>`

`<h3>`

`<p>`

``

``

``

``

`<u1>`

``

``

HTML Review

Comment tag

```
<!-- This is a comment -->
```

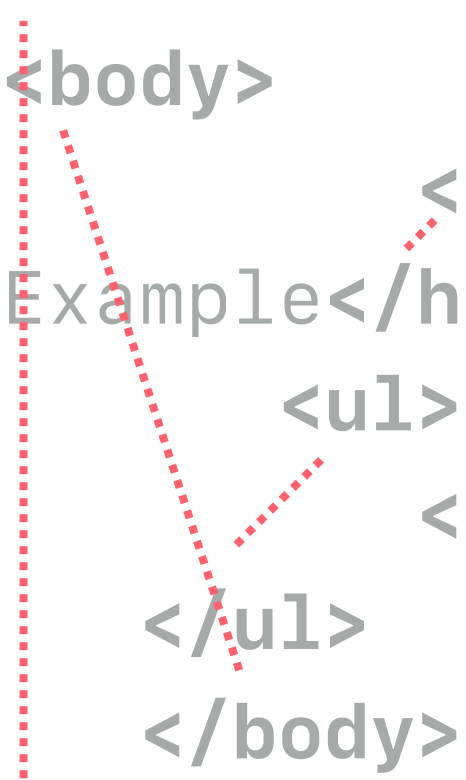

Indenting HTML

```
<html>
<body>
    <h3>
Example</h3>
    <ul><li>Item 1</li>
      <li>Item 2</li>
    </ul>
  </body>
</html>
```

HTML Review

Indenting HTML

```
<html>
<body>
  Example
  <h3>
    <ul><li>Item 1</li>
      <li>Item 2</li>
    </ul>
  </h3>
</body>
</html>
```

A diagram illustrating HTML indentation. Red dotted lines connect the closing tags to their corresponding opening tags, showing the nesting structure. A vertical line connects the opening <body> tag to the closing </body> tag. A diagonal line connects the opening <h3> tag to the closing </h3> tag. Another diagonal line connects the opening tag to the closing tag. The text 'Example' is placed between the <body> and </body> tags, and the <h3> and </h3> tags are indented relative to the <body> tag.

Indenting HTML

```
<html>
  <body>
    <h3>Example</h3>
    <ul>
      <li>Item 1</li>
      <li>Item 2</li>
    </ul>
  </body>
</html>
```

Naming Your Files

- Lowercase, no spaces, dashes
- Your main HTML file should be called `index.html`

What
is CSS?

What is CSS?

What CSS Does

Defines rules for the **presentation**
of your website

What is CSS?

What CSS Does

Defines rules for the **presentation** of your website

- Typography
- Color
- Borders
- Backgrounds
- Alignment
- Positioning
- Spacing
- Transparency

What is CSS?

CSS File

```
<!DOCTYPE html>
<html>

<head>
  <title>My Page</title>
</head>

<body>
  <p>Hello World!</p>
</body>

</html>
```

HTML

```
body {
  font-family: sans-serif;
  background-color: white;
}

p {
  color: gray;
  font-size: 18px;
}

a {
  color: red;
}
```

CSS

What is CSS?

CSS File

```
<link rel="stylesheet" href="style.css">
```

CSS Syntax

CSS Syntax

```
h1 {  
    font-size: 32px;  
}
```

```
body {  
    background-color: black;  
    font-family: serif;  
    color: white;  
}
```

CSS Syntax

```
selector {  
    property: value;  
}
```

CSS Syntax

```
selector {  
    property: value;  
}
```

The **selector** chooses which HTML element to style

CSS Syntax

```
h1 {  
    property: value;  
}
```

```
strong {  
    property: value;  
}
```

CSS Syntax

```
selector {  
    property: value;  
}
```

A **property** is the style attribute
we want to change

CSS Syntax

```
selector {  
    font-size: value;  
    color: value;  
    background-color: value;  
    margin-bottom: value;  
}
```

CSS Syntax

```
selector {  
    property: value;  
}
```

A **value** defines what the property should be changed to

CSS Syntax

```
selector {  
    font-size: 12px;  
    color: blue;  
    background-color: white;  
    margin-bottom: 20px;  
}
```

CSS Syntax

```
selector {  
    property: value;  
}
```

```
selector {  
    property: value;  
    property: value;  
    property: value;  
}
```

CSS Syntax

```
h1 {  
    font-size: 32px;  
}
```

```
body {  
    background-color: black;  
    font-family: serif;  
    color: white;  
}
```

CSS Syntax

Linking CSS to your HTML

```
<head>  
  <meta charset="utf-8">  
  <title>My website</title>  
  <link rel="stylesheet" href="style.css">  
</head>
```

CSS Properties

Properties

- There are LOTS of them! Keep a reference handy.
- Always lowercase, with hyphens between words
 - e.g., **font-size**, **margin-top**

CSS Properties

font-size

font-size: 12px;

~~**font-size: 12;**~~

```
h1 {  
    font-size: 32px;  
}
```

CSS Properties

font-family

font-family: Georgia, serif;

font-family: Helvetica, sans-serif;

font-family: "Courier New", monospace;

```
p {  
    font-family: Georgia, serif;  
}
```

CSS Properties

color

```
color: blue;
```

```
color: #0000ff;
```

```
color: rgb(0, 0, 255);
```

```
strong {  
    color: #ccff00;  
}
```

Additive Color

Additive Color

Name	Hex	RGB
red	#FF0000	rgb(255, 0, 0)
green	#00FF00	rgb(0, 255, 0)
blue	#0000FF	rgb(0, 0, 255)
cyan	#00FFFF	rgb(0, 255, 255)
magenta	#FF00FF	rgb(255, 0, 255)
yellow	#FFFF00	rgb(255, 255, 0)

Additive Color

	Name	Hex	RGB
	black	#000000	rgb(0, 0, 0)
		#333333	rgb(51, 51, 51)
		#666666	rgb(102, 102, 102)
		#999999	rgb(153, 153, 153)
		#CCCCCC	rgb(204, 204, 204)
	white	#FFFFFF	rgb(255, 255, 255)

CSS Properties

Typography

`color`
`font-family`
`font-size`
`line-height`
`letter-spacing`

`font-style`
`font-weight`

`text-align`
`text-transform`
`text-decoration`

Sizing

`width`
`height`

Spacing

★ `margin`
★ `padding`

Backgrounds

`background-color`
★ `background-image`
`background-repeat`
★ `background-size`

Borders

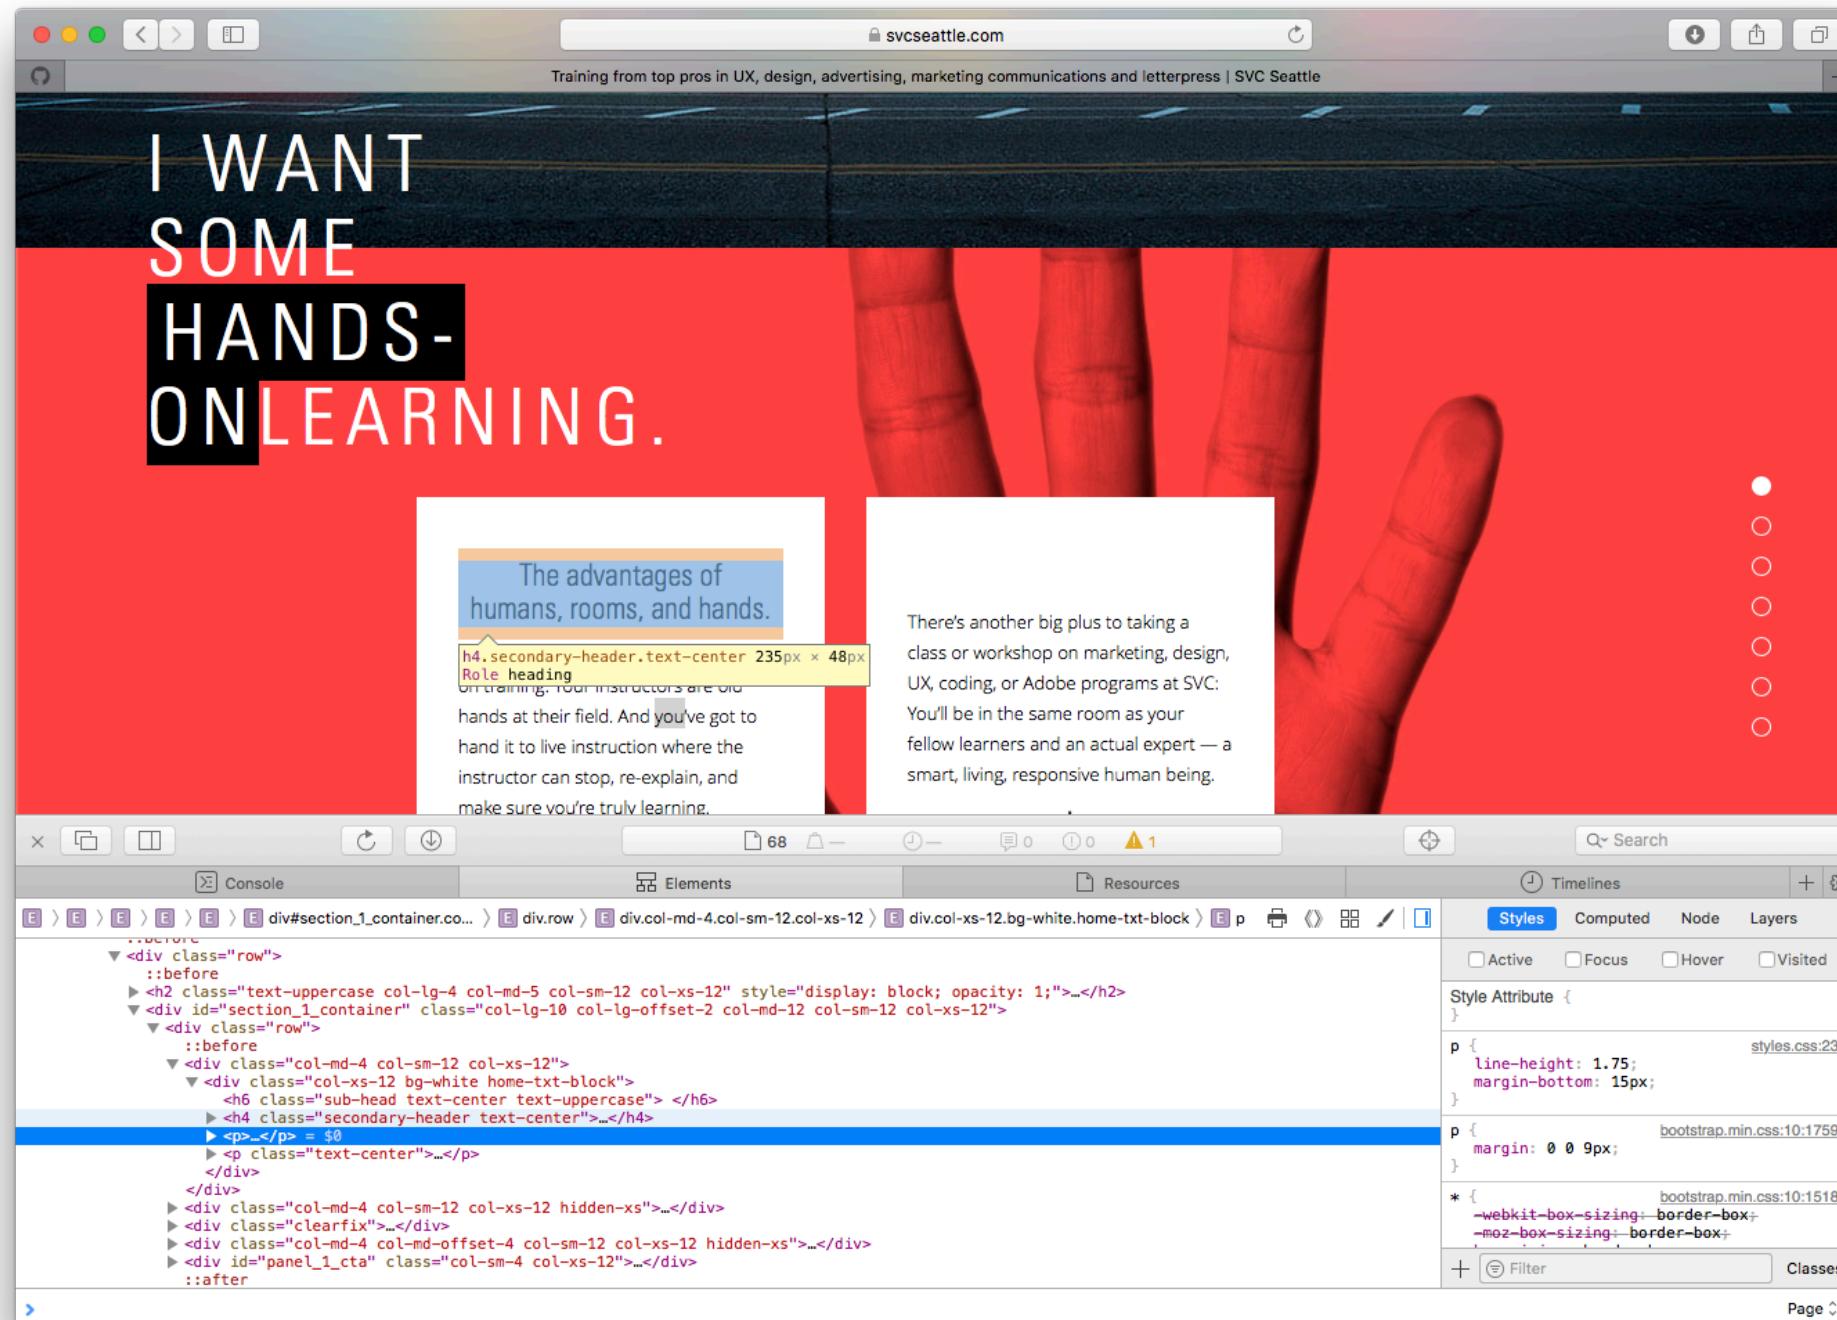

★ `border`
`border-radius`

Special Selectors

`:hover`
`:active`

Browser Developer Tools

Browser Developer Tools

Browser Developer Tools

- Right click > Inspect
- View > Developer > Developer Tools
- ⌘⇧I

- Preferences... > Advanced > Show Develop Menu
- Right click > Inspect Element
 - Develop > Show Web Inspector
 - ⌘⇧I

F12

Useful features

- View the source of any webpage
- Tweak CSS rules of specific elements
- See the assets loaded from a page
- Test a website at different device sizes

Browser Developer Tools

More info...

- Safari Web Inspector
- Google Chrome DevTools
- Microsoft Edge Developer Tools

Using Web Fonts

What are Web Fonts?

Web fonts are fonts you can use on your websites that are stored on the internet.

Because they're stored on the internet, visitors don't have to have the font installed on their computers to see them.

What are Web Fonts?

Note: you must be connected to the internet for the fonts to show up.

Web Font Resources

For this class we will use Google Fonts, available at <http://fonts.google.com/>, as all the fonts are free!

Other paid resources include [TypeKit](#) and [Typography.com](#).

Using Web Fonts

Using Google Fonts

1. Find the font(s) you want to use, and add with the plus button

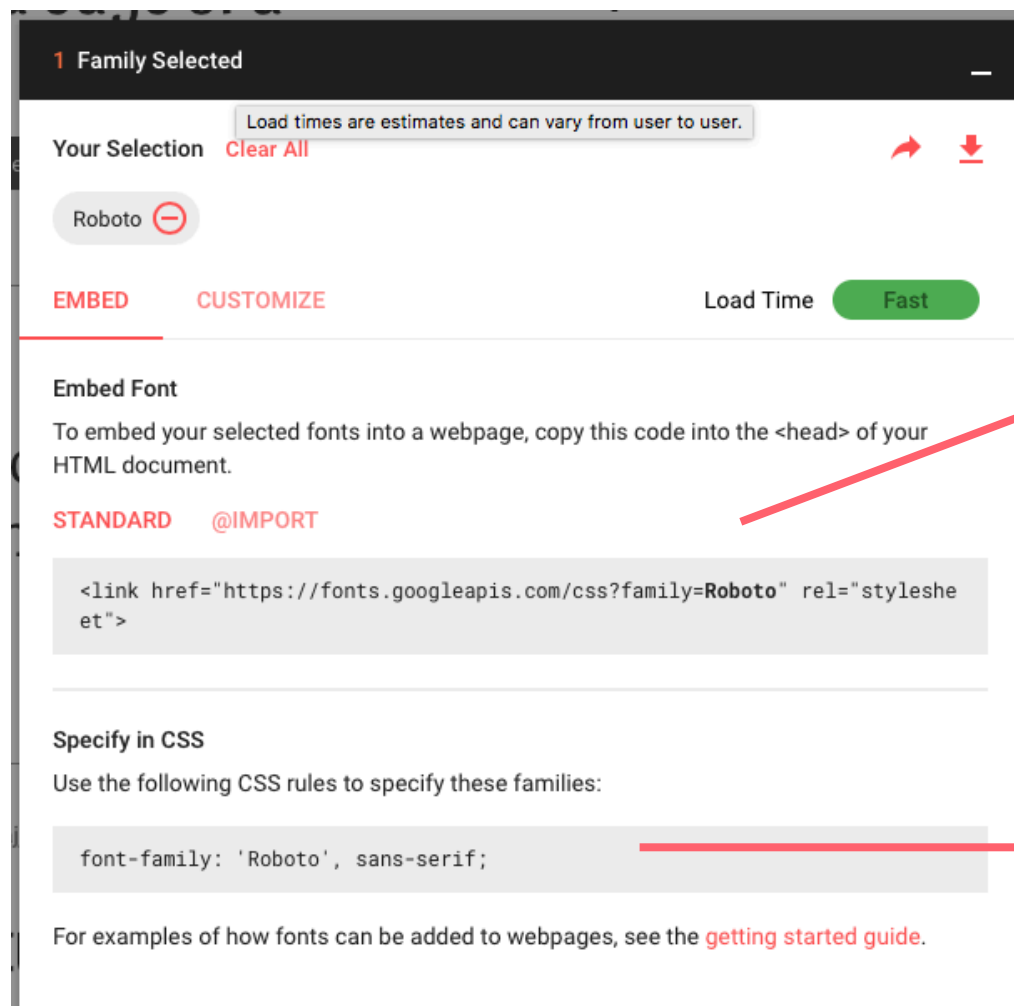

All their equipment
and instruments are
alive.

Using Web Fonts

Using Google Fonts

2. Use the panel at the bottom of the page to get the HTML & CSS

<head>

<title>My website</title>

<link href="style.css">

<link href="https://fonts..."

</head>

p {

font-family: "Roboto", s...

font-weight: 400;

}

Getting on the Web

What is the Web?

A bunch of connected computers that have websites on them.

A **server** is a computer that is "serving" the websites to other computers.

Getting on the Web

What is the Web?

To get your website on the internet, you need to upload it to a server computer.

Web Hosting vs Domains

Web Hosting is the file space used to store your website files on a server

A **Domain** is the address for accessing those website files on the web

Getting on the Web

Web Hosting vs Domains

Cheap **web hosting** costs about \$5/mo

A cheap **domain name** costs about \$5/yr

Getting on the Web

Web Hosting

Almost all cheap hosting companies are owned by the same company: ELG.

Getting on the Web

Domain names

Once you register a domain name, it is yours for as long as you keep renewing it!

Go get a cool domain name!

Domain names

There are now hundreds of TLDs (the part of the domain after the dot):

mycooldomain.com

mycooldomain.website

mycooldomain.pizza

mycooldomain.io

FTP

File Transfer Protocol is used to transfer files between your computer and your web hosting server.

You can use an FTP application to make this process nice and easy.

Getting on the Web

Cyberduck

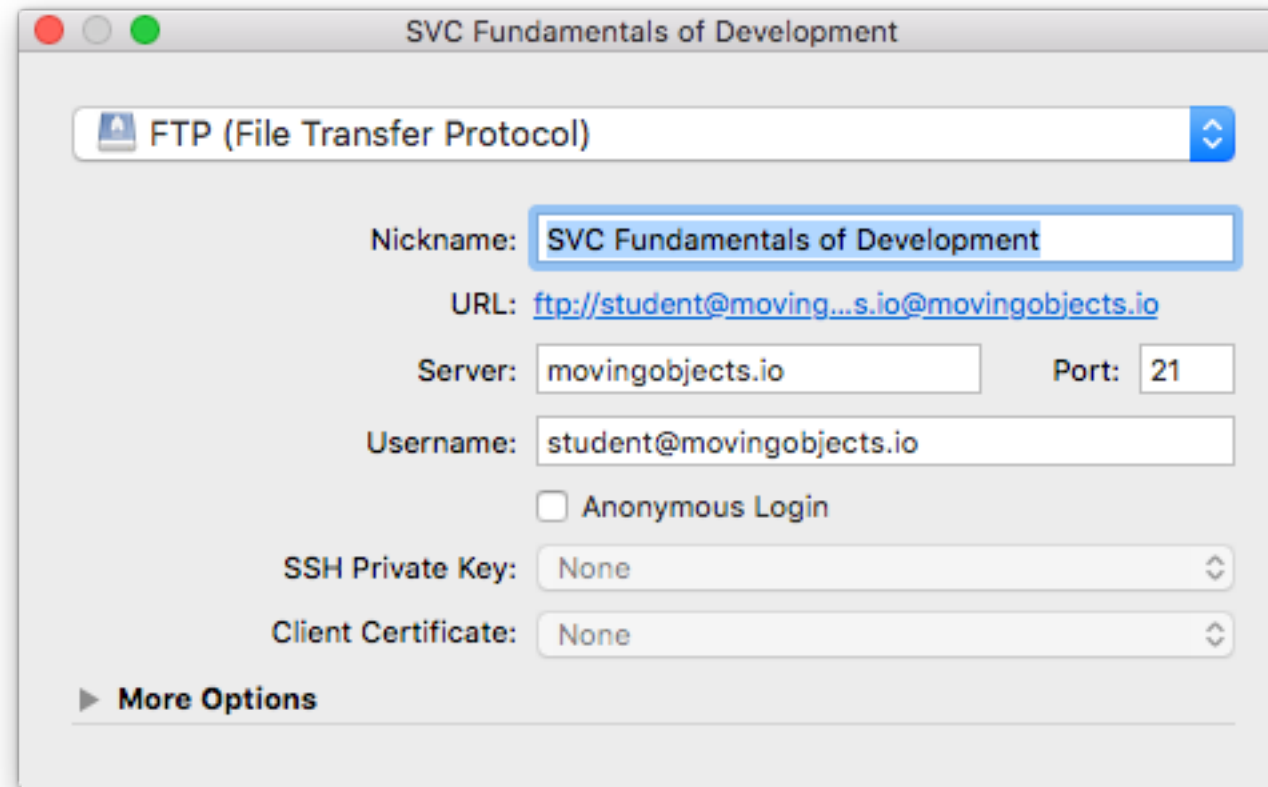

Cyberduck is a free FTP application
available at <http://cyberduck.io>.

Info you need to upload

- Protocol (typically FTP or SFTP)
- Server address
- Username & password

Getting on the Web

SVC Fundamentals of Development

FTP (File Transfer Protocol)

Nickname: SVC Fundamentals of Development

URL: <ftp://student@moving...s.io@movingobjects.io>

Server: movingobjects.io Port: 21

Username: student@movingobjects.io

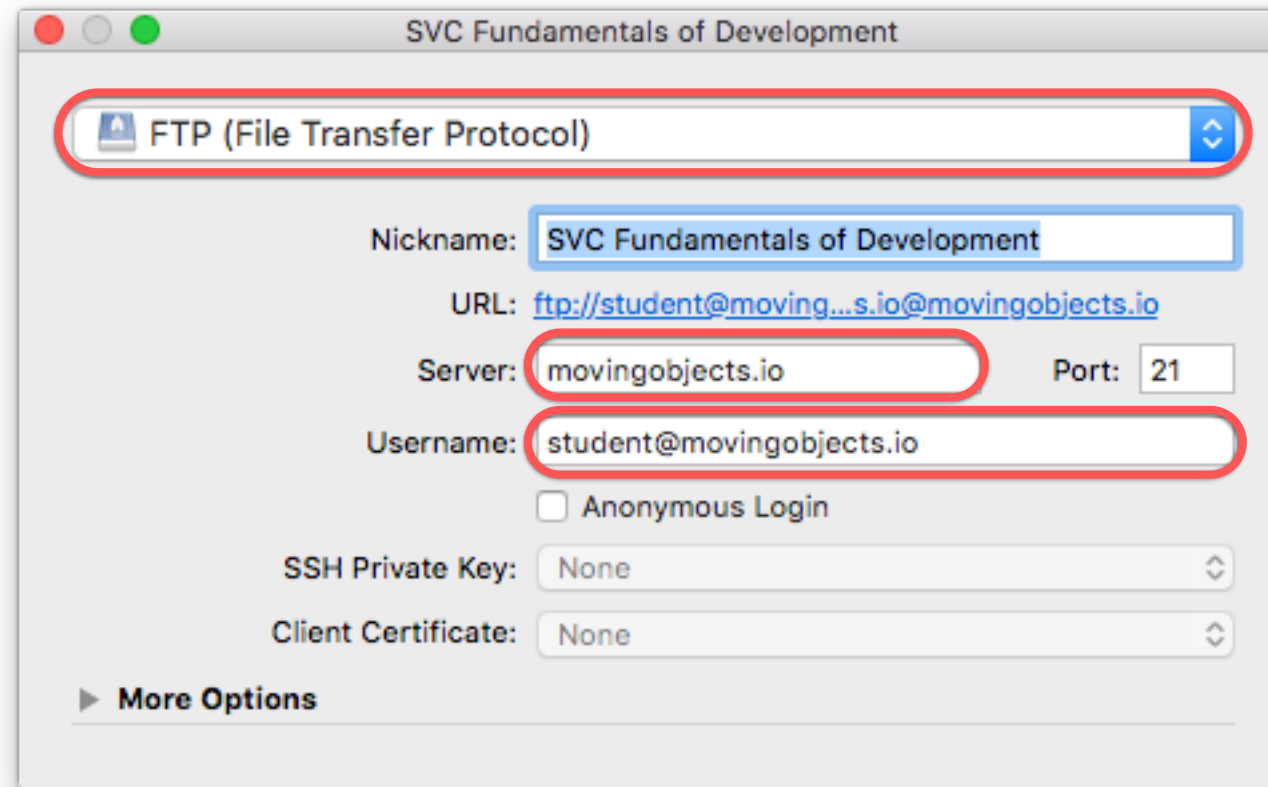

☐ Anonymous Login

SSH Private Key: None

Client Certificate: None

► More Options

Getting on the Web

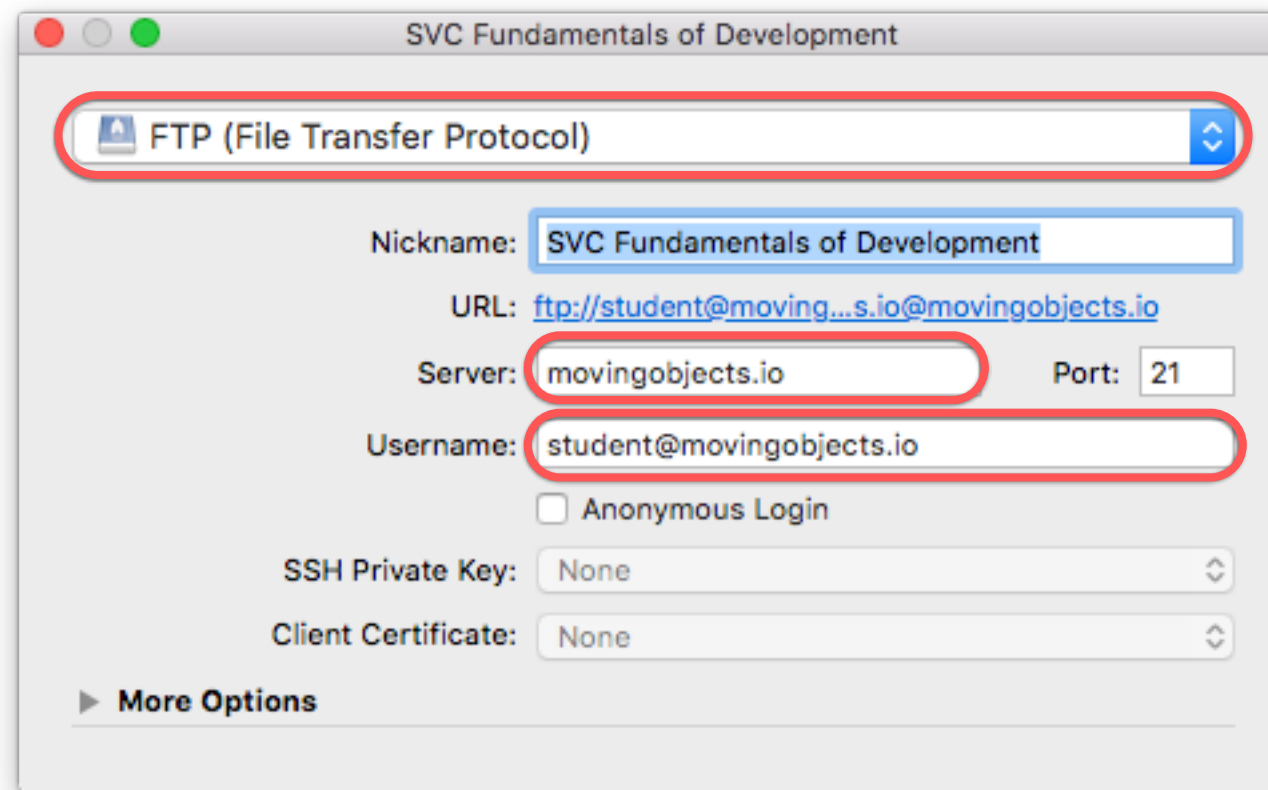

The screenshot shows a configuration window for an FTP client. The title bar reads "SVC Fundamentals of Development". The main content area has several fields and options:

- A protocol dropdown menu at the top is set to "FTP (File Transfer Protocol)".
- A "Nickname:" field contains the text "SVC Fundamentals of Development".
- A "URL:" field contains the text "ftp://student@moving...s.io@movingobjects.io".
- A "Server:" field contains "movingobjects.io" and a "Port:" field contains "21".
- A "Username:" field contains "student@movingobjects.io".
- An unchecked checkbox labeled "Anonymous Login".
- An "SSH Private Key:" dropdown menu set to "None".
- A "Client Certificate:" dropdown menu set to "None".
- A "More Options" button at the bottom left.

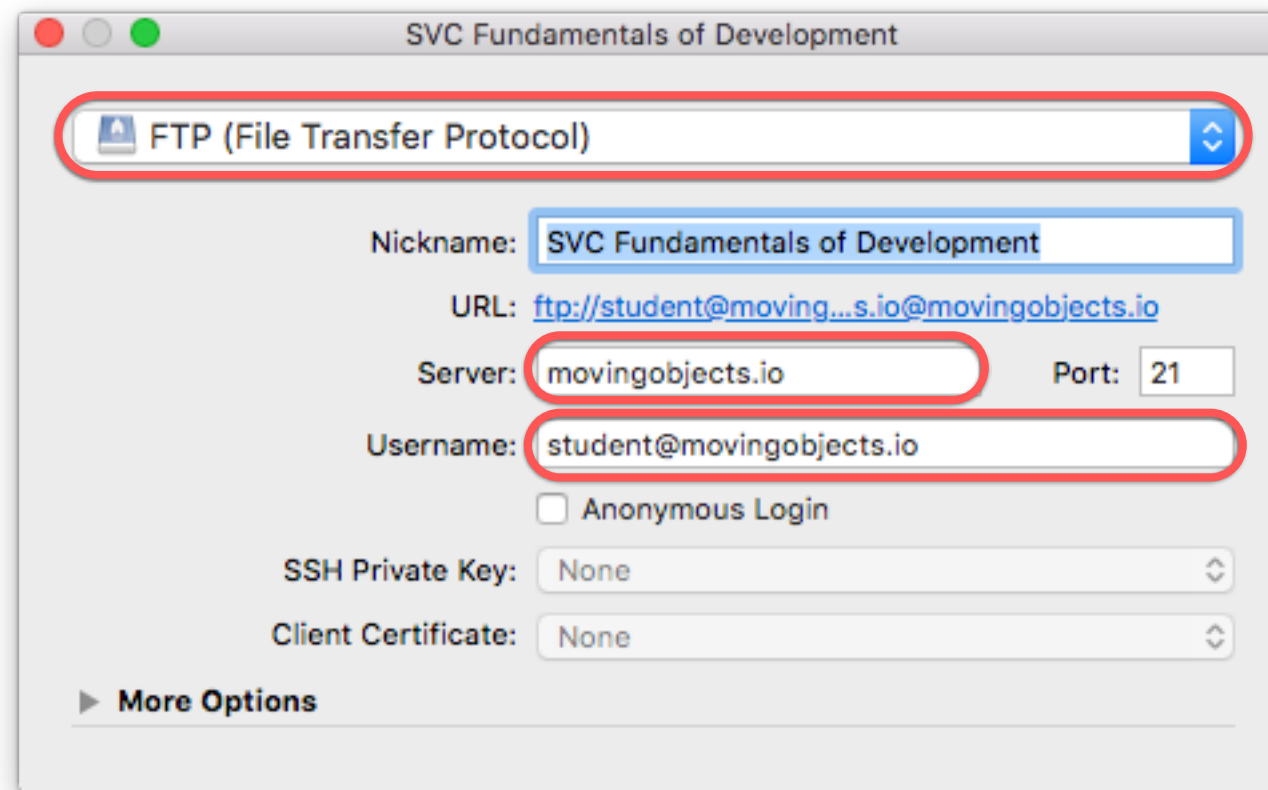

Red circles highlight the protocol dropdown, the server field, and the username field. A blue highlight is on the nickname field.

Getting on the Web

What you upload here shows up at:
<http://movingobjects.io/svc/students/...>

Getting on the Web

What you upload here shows up at:
<http://movingobjects.io/svc/students/...>

Getting on the Web

Uploading Strategies

When you've logged in, the file folder you see is just a folder on another computer that you can drag files into.

Uploading Strategies

Always keep your original web files on your own computer.

Think of your web files only as a **COPY** of these original files.

Uploading Strategies

Double check folder and file names:

- lowercase
- no spaces
- no special characters

Homework

Homework

Adding Some Style

Use CSS to style up your Favorite Animal Website

Adding Some Style

- Use the `<link>` tag to link your CSS file (named `style.css`) to all pages of your website
- Use the CSS properties we covered in class to style all the elements of the page, including the `<body>` element.

Adding Some Style

- Upload your site to your own folder on the class website using provided FTP credentials

e.g.,

<http://movingobjects.io/svc/students/scott/>

Homework

EXTRA: Two styles

- Make a copy of your project folder, and try adding a completely unique style to your site, but without altering the HTML in any way

Recommended Resource

- Go through the Khan Academy Intro to CSS tutorial for review and to get a preview of the topics we'll be covering next week

Questions? Comments?

- Visit <http://movingobjects.io/svc> for class slides, code samples, resources
